

Date: 14/4-16

Facilitator: Philip Ekman

Participants: Emilia Vestlund, Razmus Strandell, Emil Hukic

1. Objectives (5 min). Resolve any issues preventing the team to continue.

- Application structure
- Development environment
- Project setup
- Use cases

2. Reports (15 min) from previous meeting

All in the group have looked at some Android tutorials. We feel more safe with developing for the Android environment now. We have shared with each other how we want the application to look. All of us did a small mockup each.

3. Discussion items (35 min)

We discussed how we will build the application. We decided that we will use Android Studio for development. Then we discussed our domain model again and how all of the parts in the application will talk to each other.

We discussed additional use cases and talked about our RAD.

4. Outcomes and assignments (5 min)

We decided on an application flow and we have a basic idea on how the application will look. We are all on the same page about all the features that we should include.

- Philip will setup the project in Android Studio and start with the deck screen.
- Emil will create a first version of our model in the application
- Razmus and Emilia will start to implement the main menu screen

5. Wrap up

Next meeting will take place on Tuesday 13:00 in Linsen.
